

## LISCON Thin Client Light

A superior thin client for any environment, where more than just Windows and Citrix sessions are necessary. The built-in Mozilla Firefox is a state-of-the-art webbrowser that allows access to any web based application. Powered by our Linux based LISCON OS, the device is secure against malware and does not need updates often. Local devices like USB memory devices can be used free of any hassle.

Optionally the TC Light is available with the PowerTerm terminal emulation suite to allow connection to any host type. Furthermore, a native IBM iSeries (formerly AS/400, 5250) client is optionally available. Ideal in any environment, TC Light is a versatile and flexible terminal at a very reasonable price. For more information please have a look at the datasheet. LISCON TC Light Key Features

- Linux based LISCON OS. LISCON OS is per se protected against virii and other malware, thus eliminating the need for frequent update, patch and hotfix deployment.
- Internet. The builtin Mozilla Firefox browser allows to use both Internet and Intranet. Of course the browser includes the essential Flash plugin.
- Zero on-site administration. No need for expensive on-site administration &ndash; TC SL is fully remote manageable. Client configuration and firmware images can also be managed comfortably with our LISCON Management Console.
- Terminal emulation. The optionally available PowerTerm suite provides connectivity to almost any host type in the world. Also optionally a native IBM iSeries client is available.
- &bdquo;Thin&ldquo; Hardware. No moving parts disturb the user - the TC SL is absolutely noiseless. Of course this also assures a long lifetime. The slim case and the integrated power supply save desktop space.
- Local devices. Use local devices like printer, USB storage media or CD drives, smartcard reader, or serial port.
